NEW

PREVIOUS

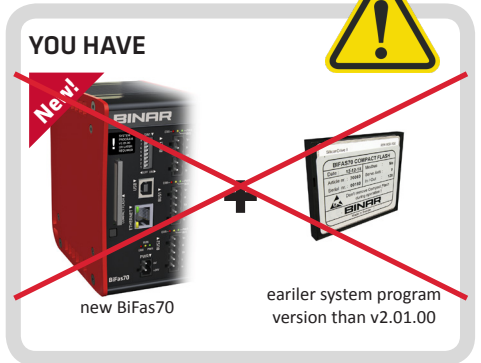

DELIVERY STARTING FROM OCTOBER 2016

system program info label
eject button

INVALID COMBINATION

PREVENTIVE UPDATE

– If you later want to be able to replace a BiFas70 with a new one but keep the previous compact flash

YOU HAVE

previous BiFas70
earlier system program version than v2.01.00

ACTION

Update your current system.

1. Visit binarelektronik.se/en/support/faq
2. Download "Bifas70_System_Program_V2.01.00.zip"
3. Unzip the files in a temporary folder
4. Use you favorite FTP tool to connect to BiFas70, use:
username: becareful
password: thinkfirst
5. Copy the files to the Bifas70 subfolder \UHS\BF
6. Reboot BiFas70

YOU GET

previous BiFas70
system program version v2.01.00 or later

REPLACEMENT SETUP

– If you need to replace a BiFas70 that has a system program version earlier than v2.01.00

YOU HAVE

previous BiFas70 to be replaced
earlier system program version than v2.01.00

YOU NEED

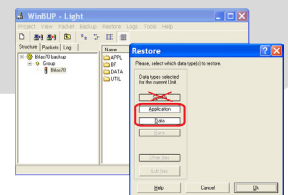

new compact flash with system program version v2.01.00 or later
(incl. in the new BiFas70)

ACTION

Restore a backup of your previous data and application to the new BiFas70.

Use the same method that was used to create the backup (WinBup, FTP etc.).

Note! Only restore the data and application, not the system.
